## Claim Objections

Claim objected to because of the following informalities:

Claim 16 depends on canceled claim 15.

Appropriate correction is required.

#### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 1. Claims 1-2,13-14,24-26,29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kim (6,191,762 B1) in view of Jeddeloh (6,157,398) and Nagai (6,608,610 B2).

As to claims 1-2,29 Kim teaches an address data processor for a plasma display panel (PDP) (Col. 1, lines 6-10), comprising:

a subfield data generator for receiving the selected data, and generating corresponding subfield data (fig. 1, item 14a, col. 1, lines 25-27 and 59-63);

a frame memory for storing the subfield data, and outputting the stored subfield data (fig. 1, item 14b, col. 1, lines 25-29); and

a subfield data arranger for receiving the subfield data output by the

Art Unit: 2629

frame memory, and arranging the received subfield data as address data for each subfield (fig. 1, item 14c, from col. 1, line 59 to col. 2, line 8).

Kim does not disclose using a rising edge and a falling edge of a reference clock signal.

Jeddeloh teaches to enables the transfers to the frame memory on both a rising edge and a falling edge of a reference clock signal (fig.2, items 156,162, col. 4, lines 20-40).

It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate Jeddeloh teachings into Kim system in order to enable pipelining (col. 4, lines 30-40 in the Jeddeloh reference).

Kim and Jeddeloh do not disclose an RGB mixer for receiving the RGB video data, selecting data as. a specific combination of the RGB video data, and outputting the selected data to the subfield data generator.

Nagai teaches an RGB mixer for receiving the RGB video data, selecting data as a specific combination of the RGB video data, and outputting the selected data to the subfield data generator (fig. 1A, items 14-15, col. 9, lines 36-47).

It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate Nagai teachings into Kim and Jeddeloh system in order to, response to signal format (col. 1, lines 36-38 in the Nagai reference).

As to claims 13-14, Kim teaches a method processing data for a plasma display panel (PDP) (Col. 1, lines 6-10), comprising:

Art Unit: 2629

b) storing the subfield data in a frame (fig. 1, item 14b, col. 1, lines 25-29);

- . c) reading the subfield data stored in the frame memory (fig. 1, item 14b, col. 1, lines 25-29); and
  - (d) arranging the subfield data read from the frame memory as address data for each subfield, and outputting the address (fig. 1, item 14c, from col. 1, line 59 to col. 2, line 8).

Kim does not disclose using a rising edge and a falling edge of a reference clock signal.

Jeddeloh teaches to enables the transfers to the frame memory on both a rising edge and a falling edge of a reference clock signal (fig.2, items 156,162, col. 4, lines 20-40).

It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate Jeddeloh teachings into Kim system in order to enable pipelining (col. 4, lines 30-40 in the Jeddeloh reference).

Kim and Jeddeloh do not disclose receiving the RGB video data, selecting video data as a specific combination of the RGB video data.

Nagai teaches an RGB mixer for receiving the RGB video data, selecting data as a specific combination of the RGB video data (fig. 1A, items 14-15, col. 9, lines 36-47).

Art Unit: 2629

It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate Nagai teachings into Kim and Jeddeloh system in order to, response to signal format (col. 1, lines 36-38 in the Nagai reference).

As to claim 24, Kim teaches in a method processing data in a plasma display panel (PDP), a recording medium for storing a program for performing address data processing operations (Col. 1, lines 6-10), comprising:

- a) generating subfield data corresponding to RGB input video data (fig. 1, item 14a, col. 1, lines 25-27 and 59-63);
- b) storing the subfield data in a frame (fig. 1, item 14b, col. 1, lines 25-29); c) reading the subfield data stored in the frame memory (fig. 1, item 14b, col. 1, lines 25-29); and
- (d) arranging the subfield data read from the frame memory as address data for each subfield, and outputting the address data to the PDP to represent gray on the PDP (fig. 1, item 14c, from col. 1, line 59 to col. 2, line 8).

Kim does not disclose using a rising edge and a falling edge of a reference clock signal.

Jeddeloh teaches to enables the transfers to the frame memory on both a rising edge and a falling edge of a reference clock signal (fig.2, items 156,162, col. 4, lines 20-40).

It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate Jeddeloh teachings into Kim system in order to enable pipelining (col. 4, lines 30-40 in the Jeddeloh reference).

Art Unit: 2629

As to claim 25-26 Kim teaches an address data processor for a plasma display panel (PDP) (Col. 1, lines 6-10), comprising:

a subfield data generator for receiving video data having at least color, and generating corresponding subfield data (fig. 1, item 14a, col. 1, lines 25-27 and 59-63);

a frame memory for storing the subfield data, and outputting the stored subfield data (fig. 1, item 14b, col. 1, lines 25-29); and

a subfield data arranger for receiving the subfield data output by the frame memory, arranging the subfield data as address data for each subfield, and outputting the address data to represent gray on the PDP (fig. 1, item 14c, from col. 1, line 59 to col. 2, line 8).

Kim does not disclose using a rising edge and a falling edge of a reference clock signal.

Jeddeloh teaches to enables the transfers to the frame memory on both a rising edge and a falling edge of a reference clock signal (fig.2, items 156,162, col. 4, lines 20-40).

It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate Jeddeloh teachings into Kim system in order to enable pipelining (col. 4, lines 30-40 in the Jeddeloh reference).

2. Claims 4, 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kim and Jeddeloh as applied to claims 1,13 above, and further in view of Nagai (6,608,610 B2).

Application/Control Number: 10/840,169 Page 7

Art Unit: 2629

Kim and Jeddeloh do not disclose an RGB mixer for receiving the RGB video data, selecting data as a specific combination of the RGB video data, and outputting the selected data to the subfield data generator.

Nagai teaches an RGB mixer for receiving the RGB video data, selecting data as a specific combination of the RGB video data, and outputting the selected data to the subfield data generator (fig. 1A, items 14-15, col. 9, lines 36-47).

It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate Nagai teachings into Kim and Jeddeloh system in order to response to signal format (col. 1, lines 36-38 in the Nagai reference).

3. Claims 5,17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nagai, Kim and Jeddeloh as applied to claim 4 above, and further in view of Sha et al (7,142,251 B2).

Nagai, Kim and Jeddeloh do not disclose RGB and GBR selection order.

Sha et al. teaches RGB and GBR selection order (fig. 2B, item 51, col. 11, lines 43-59).

It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate Sha et al. teachings into Nagai, Kim and Jeddeloh system in order to preprocess different formats (col.1, lines 16-21 in the Sha et al. reference).

## Allowable Subject Matter

Art Unit: 2629

4. Claim 6-12,18-23,27-28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Relative to claims 6,18,27 the major difference between the teaching of the prior art of record (Kim, Jeddeloh and Nagai) and the instant invention is that a subfield matrix for receiving the subfield data generated by the subfield data generator and output in series, converting the subfield data for a specific number of neighboring cells on the same line into parallel subfield data, and outputting the parallel subfield data to the frame memory.

Claims 19-23 depend on claim 18.

Relative to claims 7,28 the major difference between the teaching of the prior art of record (Kim, Jeddeloh and Nagai) and the instant invention is that the subfield data generator comprises a first subfield data generator and a second subfield data generator for respectively generating subfield data corresponding to two sets of video data selected from the RGB video data, and the subfield matrix comprises a first subfield matrix and a second subfield matrix for respectively receiving the subfield data output in series by the first and second subfield data generators, generating parallel subfield data corresponding to a specific number of neighboring cells, and outputting the parallel subfield data.

Claim 8 depends on claim 7.

Relative to claim 7 the major difference between the teaching of the prior art of record (Kim, Jeddeloh and Nagai) and the instant invention is that a data buffer for

Application/Control Number: 10/840,169 Page 9

Art Unit: 2629

receiving the subfield data generated by the subfield data generator, dividing the subfield data into two subfield data sets, providing the two subfield data sets to the frame memory using the rising edge and the falling edge of the reference clock signal, respectively, reading the subfield data sets using the rising edge and the falling edge, respectively, of the reference clock signal, and providing the two subfield data sets to the subfield data arranger.

Claims 10-12 depend on claim 9.

#### Response to Arguments

5. Applicant's arguments filed 10/19/07 have been fully considered but they are not persuasive:

On page 8, last paragraph of Remark, Applicant's stated that Nagai does not disclose or suggest "an RGB mixer for receiving RGB video data, and selecting data as a specific combination of the RGB video data" as recited in independent Claims. However, Nagai teaches an RGB mixer for receiving the RGB video data, selecting data as a specific combination of the RGB video data, and outputting the selected data to the subfield data generator (fig. 1A, items 14-15, col. 9, lines 36-47).

Notice, that absent clearly definition in the claims, any combination of the RGB video data is specific, including two sets of video data.

#### Conclusion

Art Unit: 2629

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

# Telephone Inquire

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leonid Shapiro whose telephone number is 571-272-7683. The examiner can normally be reached on 8 a.m. to 5 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Hjerpe can be reached on 571-272-7691. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
